Chunk options		
option	default value	description
Code evaluation		
child	NULL	A character vector of filenames. Knitr will knit the files and place them into the main document.
code	NULL	Set to R code. Knitr will replace the code in the chunk with the code in the code option.
engine	'R'	Knitr will evaluate the chunk in the named language, e.g. <code>engine = 'python'</code> . Run <code>names(knitr::knit_engines\$get())</code> to see supported languages.
eval	TRUE	If <code>FALSE</code> , knitr will not run the code in the code chunk.
include	TRUE	If <code>FALSE</code> , knitr will run the chunk but not include the chunk in the final document.
purl	TRUE	If <code>FALSE</code> , knitr will not include the chunk when running <code>purl()</code> to extract the source code.
Results		
collapse	FALSE	If <code>TRUE</code> , knitr will collapse all the source and output blocks created by the chunk into a single block.
echo	TRUE	If <code>FALSE</code> , knitr will not display the code in the code chunk above it's results in the final document.
results	'markup'	If <code>'hide'</code> , knitr will not display the code's results in the final document. If <code>'hold'</code> , knitr will delay displaying all output pieces until the end of the chunk. If <code>'asis'</code> , knitr will pass through results without reformatting them (useful if results return raw HTML, etc.)
error	TRUE	If <code>FALSE</code> , knitr will not display any error messages generated by the code.
message	TRUE	If <code>FALSE</code> , knitr will not display any messages generated by the code.
warning	TRUE	If <code>FALSE</code> , knitr will not display any warning messages generated by the code.
Code Decoration		
comment	'###'	A character string. Knitr will append the string to the start of each line of results in the final document.
highlight	TRUE	If <code>TRUE</code> , knitr will highlight the source code in the final output.
prompt	FALSE	If <code>TRUE</code> , knitr will add <code>&gt;</code> to the start of each line of code displayed in the final document.
strip.white	TRUE	If <code>TRUE</code> , knitr will remove white spaces that appear at the beginning or end of a code chunk.

option	default value	description
Chunks		
opts.label	NULL	The label of options set in <code>knitr::opts_template()</code> to use with the chunk.
R.options	NULL	Local R options to use with the chunk. Options are set with <code>options()</code> at start of chunk. Defaults are restored at end.
ref.label	NULL	A character vector of labels of the chunks from which the code of the current chunk is inherited.
Cache		
autodep	FALSE	If <b>TRUE</b> , knitr will attempt to figure out dependencies between chunks automatically by analyzing object names.
cache	FALSE	If <b>TRUE</b> , knitr will cache the results to reuse in future knits. Knitr will reuse the results until the code chunk is altered.
cache.comments	NULL	If <b>FALSE</b> , knitr will not rerun the chunk if only a code comment has changed.
